Laboratory test request

Request and sample record only. The testing laboratory issues the actual results.

01 Project & laboratory

Project / contractor

Laboratory / contact

Jurisdiction / approving engineer or agency

Requested report date / project reference

02 Sample traceability

Exact material / grade

Source / lot / stockpile identification

Sample ID / collected by / date

Sampling method / chain-of-custody reference

03 Required scope (confirm with laboratory & project professional)

Governing specification / edition / acceptance criteria reference

- [ ] Gradation / fines: laboratory to confirm applicable method(s)
- [ ] Atterberg limits: only where required by project specification
- [ ] Moisture-density / compaction: only where required
- [ ] Other required tests: identify methods and scope below

Exact test methods / additional scope / reporting instructions

04 Report requirements

List client, project, source / grade, sample ID, sampling and test dates, methods and measured results. Identify qualifications or deviations. Include comparisons only against supplied acceptance criteria. Confirm laboratory qualifications and any required signature / seal before commissioning testing.

Do not fill this template with assumed results or mark material certified. A CTM client name does not make CTM the testing laboratory; a test report does not establish agency acceptance.
